"Good Cooking Made Certain"

RED CROSS OIL STOVES

With Lorain High-Speed Oil Burner

Construction The general appearance and handsome finish of Red Cross Oil Stoves immediately impress the prospective buyer favorably, while closer examination, and understanding of their operation by demonstration, conclusively convince the customer that, from the standpoint of efficiency, economy, convenience and general utility, they are unsurpassed.

Parts All castings and steel parts are plain and smooth, and hence are easy to keep clean. All corners and joints are securely braced and reinforced. Each stove is provided with leg pans, so that the stove stands firm and rigid. The accessibility and simplicity of all the working parts of Red Cross Cook Stoves and Lorain High Speed Oil Burners are features that appeal both to the merchant and the user.

Finish The design is paneled mission style with pearl gray enamel and brilliant black touches with sparkling nicked castings, porcelain enameled chimneys, brass burners and aluminized square top grates. This neat, plain construction makes a handsome effect that is very striking.

Tops The cooking top on all Red Cross Oil Cook Stoves is large and roomy. There is plenty of space for utensils without crowding or interference. The tops are countersunk and fitted with square grate castings which, when in place, are perfectly flush with the cooking top so that utensils can be easily moved about without jarring or rocking.

Glass The oil containers, or tanks, on **Tanks** all Red Cross Oil Cook Stoves are made of glass, so that the housewife can always tell at a glance the amount of oil on hand. All tanks are fitted with an automatic spring-valve, which unscrews easily when refilling of tanks is necessary.

The sub-tank support is made of brass specially designed to prevent oil overflowing burners.

Supply Pipe The pipe supplying oil to the burners is heavily coated inside and outside with tin, thus protecting it against deterioration.

Back Shelves The back shelves are an optional feature. They are made with ten-inch cross-shelf located at convenient height to permit the use of a large portable oven. The cross-shelf is ample in width to accommodate large plates and utensils. Each shelf is shipped in a separate crate by itself—set up—and all ready to attach to the stove.

All stoves can be furnished with white enameled splash backs. Although we recommend white enameled splash backs for all stoves, gray only will be furnished unless white is specified. See Price List for slight difference in cost.

Height The height, 31 inches, of Red Cross Oil Cook Stoves is at the most convenient point to insure comfortable working conditions. It is not necessary to stoop, stretch or reach when cooking, everything being conveniently arranged.

Efficiency One gallon of oil will operate a burner continuously at full flame for a period of about 22 hours, and during that time will evaporate 42 pounds of water, which is a greater efficiency than that obtained by other oil stoves, as proved by comparative laboratory tests.

"Good Cooking Made Certain"

"LORAIN" HIGH-SPEED BURNER

As used on Red Cross Oil Stoves

In simplicity of design, sturdiness of construction, and efficiency of operation, the Lorain Burner is without an equal. It is made throughout of the highest-grade

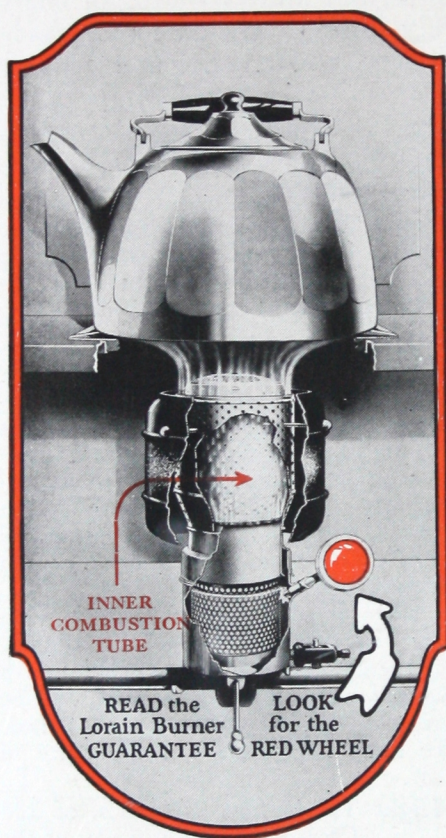

materials, and all parts are carefully assembled by expert workmen.

The Lorain Burner has many exclusive patented features such as a positive wick-stop, a removable burner-head, an interchangeable giant chimney, and a unique chimney-raising device.

But the most notable feature of the improved burner is the indestructible inner combustion tube. In this feature we feel we have contributed the greatest improvement ever made to the short chimney oil stove burner, which is admittedly superior to all other types.

Because the short chimney oil stove burner produces an intense flame which strikes directly on the bottom of the cooking utensil, the heat generated has, in the past, caused the early destruction of its vital part, the inner combustion tube.

This fault has been *completely* eliminated in the Lorain High-Speed Oil Burner by making the inner combustion tube of "Vesuvius Metal," which is not affected by the destructive action of this intense heat.

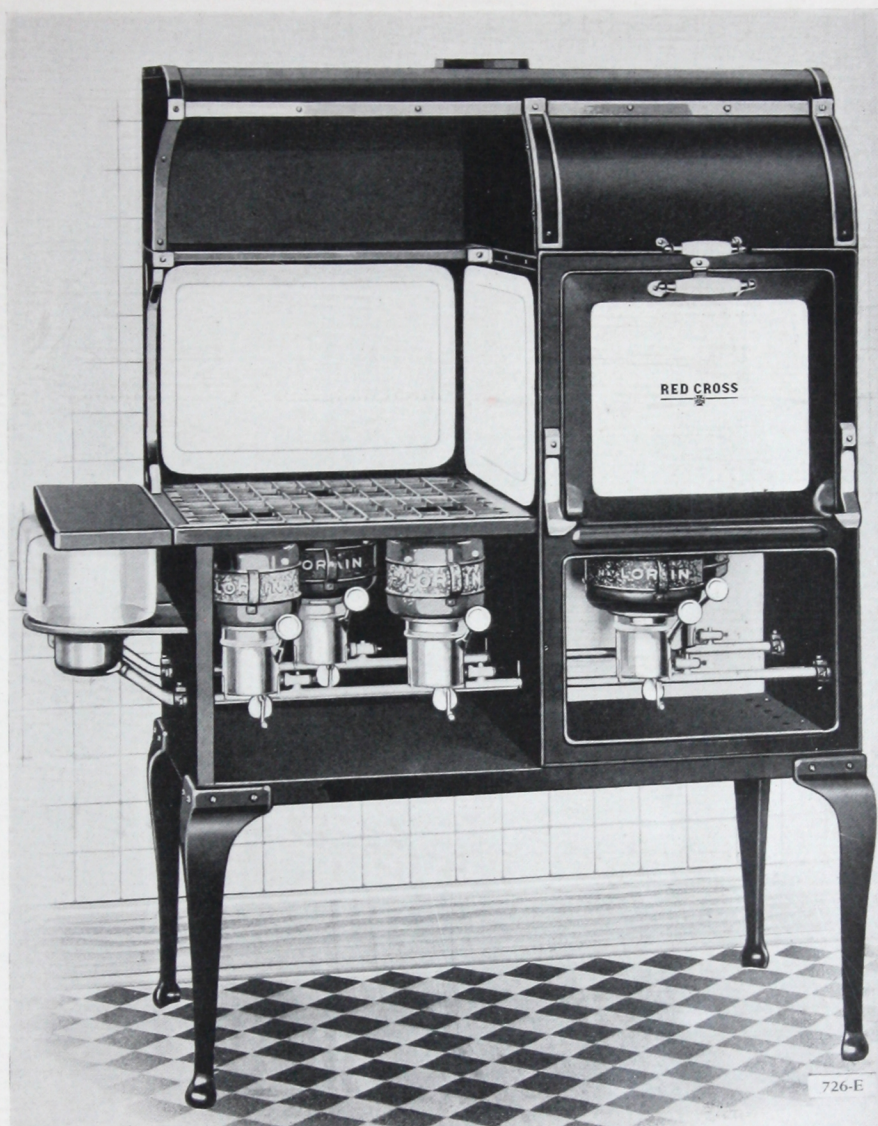

GUARANTEE

Should the inner combustion tube of the Lorain High-Speed Oil Burner burn out within ten years from date of purchase, replacement will be made entirely free of charge.

NOTE:—Red Cross Oil Stoves, in the two, three and four burner styles, are equipped with Regular size "Lorain" Chimneys. Giant Chimneys will be furnished when so specified at additional cost. The Cabinet Style Oil Stoves have two regular and one giant burner for the cooking top and two giant burners for heating the oven.
